

Bootstrap breadcrumbs: <http://getbootstrap.com/components/#breadcrumbs>

Right, so we're sort of climbing back out of the construction site now and sort of dusting ourselves off. And now we're gonna look back at the site and see what we've just done and what that's communicating to the user. In other words, do they know where they are? So let's look at the page as it stands now. Right so we've got this homepage, then we go into albums and then they go into click on an album and they go into a photo. Okay but if I look at this page now I don't really know where I am. I'm kind of, I can see this photo and I've got this highlighted thing up there that says home. So, I think it's a bit confusing, so let's see if we can fix it up a little bit and make it a bit clearer where the user is in this site. Let's go back to the home page, first of all. So there it is, and that's fine, but if we open that file up for editing. The first thing I want to do is put in a bread crumb trail. And so a typical place for a bread crumb trail is just below the title. So the title tells you, this is what the page is about. And then below that you see, this is where the page is in the site.

And bootstrap, of course, has a handy class already for making breadcrumb trails, but the tags that we use, as you'll see here, are The OL and LI tags.

```
<!-- start breadcrumb -->
  <ol class="breadcrumb">
    <li><a href="index.html">Home</a></li>
    <li><a href="albums.html">Albums</a></li>
  </ol>
<!-- / breadcrumb -->
```

So we just set a class in it called breadcrumb, like this, save it, back over there. And instantly, its got rid of all styling that we don't want and it's styled it with this highlight. Made it really clear that it's some design element on that sides. And that's the Bootstrap doing that for us. Bootstrap has this bread crumb class. Okay, so that's great. So for the home page it's fairly straightforward, cuz they haven't really been anywhere yet. And we've got the home button highlighted. So there's two things kind of saying home now.
